29         System.out.println("Buenas, aquí está la carta:");
30         System.out.println("-----");
31         for (CartaPizzas carta : CartaPizzas.values()) {
32             System.out.println("Pizza: " + carta);
33             System.out.println("Precio: " + carta.getPrecio() + "€");
34         }
35     }
36 }
```

EXAMEN PIZZAEXPRESS

The screenshot shows a Java IDE with a project named 'AppPizzaExpress'. The main window displays the output of the application. The output shows a list of pizzas and their prices, followed by a prompt to enter the desired pizza. The user enters 'atun', which is not in the list. The application then prompts for the order state, and the user enters 'ATUN'. The application calculates the total price of 7.56 and asks if the user wants to continue. The user enters 'n', and the application displays the order details: 'Pedido: RECIBIDO', 'Importe: 7.56', 'Descuento aplicado: 20%', and 'Total a pagar: 6.0'.

```
Project
Run
AppPizzaExpress
AppPizzaExpress.java
Cliente.java
Pedido.java
Empleado.java

-----
Pizza: BBQ
Precio: 9.06
Pizza: CARBONARA
Precio: 8.06
